Spectrum Integration Hub

Solutions comprised of pre-built connectors, standard-based interfaces and bulk data access

OVERVIEW

Dexter + Chaney clients can now integrate virtually any other software program with their Spectrum® Construction Software platform. Spectrum serves as the source of data truth for your business and you can leverage that data into other systems, while also expanding the power of Spectrum.

The Spectrum Integration Hub makes it easy to facilitate seamless communication between Spectrum and other applications via a variety of options. This creates an open application program interface (API) environment, based on open technology standards. The Spectrum Integration Hub allows Spectrum to operate on the same plane as many of today's other modern software applications that utilize open operating standards, allowing them to easily integrate with each other.

The benefit is increased time-to-value for your Spectrum investment, and allows you to invest in other technologies and solutions as they become available without having to hassle with workarounds or simply not being able to integrate data from multiple applications. The Spectrum Integration Hub provides the tools to future-proof your Spectrum investment and scale your company's technology adoption accordingly.

The Spectrum Integration Hub is powered by several different Spectrum offerings that can be used together or separately—depending on your integration needs:

Pre-Built Integrations

Dexter + Chaney's partnerships with leading technology integrators means that you can enjoy out-of-the-box application connectors between Spectrum and some of the most widely-used software applications today. Among them: CRM database platform Salesforce.com; travel and expense software Concur, and the data import and export application, DataLoader.

New adapters are being added on a regular basis, and if there is a specific application you're looking to integrate with Spectrum, just let your Dexter + Chaney account manager know.

Spectrum Data Exchange

Dexter + Chaney's adoption of standards-based APIs enables bi-directional integration between Spectrum and other software applications. Using Spectrum Data Exchange, Spectrum users can build their own connectors—integrations that are reliable, validated, and performant.

Less technically inclined or not able to build your own integration paths? Dexter + Chaney also provides an Excel plug-in and a library of templates designed to take advantage of the power of Spectrum Data Exchange to push data into Spectrum by simply pushing a button in Excel.

Info Link

Spectrum's Info Link functionality is another vehicle to facilitate data integration. Info Link lets you pull large amounts of data in bulk from your Spectrum database and transfer that to another application or, (as more commonly utilized) to spreadsheets where it can be reviewed or manipulated.

You remain in full control with functionality to control data security and limit access to specific data as needed.

Integrations made easy
