

Is it time for new Construction Software?

Technology has changed business around the globe—and construction is no exception. Is your company ready to meet complex modern construction requirements?

Here's a quick exercise:

Check each of the following challenges your organization has experienced in the past 24 months:

- Had a project run over budget or beyond the expected timeline
- Had to cover a major, unplanned capital expense like replacing a piece of equipment or a server
- Suffered productivity issues that slowed work or created problems
- Wasted materials that ate into your bottom line
- Struggled with keeping cash flow and/or ensuring your own bills are paid on time
- Struggled with hiring, onboarding and training new employees
- Lost money on a project that was not worth the hassle
- Had a communication breakdown between project teams or subcontractors due to information that wasn't updated
- Experienced a business disruption that forced you to cut costs to keep business running
- Spent too much time on administrative tasks due to manual tasks or duplicate data entry
- Had trouble pulling together current project data for reports to owners or other project stakeholders
- Experienced a data security breach, lost sensitive documentation or other incidents that put your company's business at risk

If you've experienced two or more common problems from the list above, it might be time to invest in connected construction management suite like **Trimble Construction One**. Powered by real-time data and workflows, **Trimble Construction One** help contractors plan, do and manage complex modern projects strategically.

See the speed and accuracy construction software can deliver.
