

Trimble Vista ERP

Comprehensive construction back-office management solution providing maximum configurability, scalability and reliability, while synchronising your data across your entire enterprise.

The Trimble [Vista™ ERP](#) is a comprehensive software solution that helps contractors manage all areas of their operations. Including functions for Accounting, Human Resources, Project Management, and Service Management (among others), Vista is designed to synchronise all aspects of a construction business - helping contractors to better meet project profitability, delivery, and quality expectations.

Vista is part of Trimble's connected construction software suite, providing contractors with real-time insight into project revenue and cost management that is tightly connected between the field and the office - ensuring every project is under budget and profitable. With this software suite, contractors benefit from original design and planning through estimating and tendering, accounting and project management, scheduling, field operations, drawing and document control, to handover and subsequent maintenance.

How Vista software empowers your back-office and field teams to work smarter

JOB-COST ACCOUNTING

Deliver timely, accurate accounting and work-in-progress tracking with Vista's intuitive job cost features. Directly enter budgets and variations or load data directly from connected [project management](#) and estimating solutions. View on-demand cost information and drill down into detailed reports and dashboards to ensure every project is under budget and profitable.

SERVICE MANAGEMENT

Remove the guesswork from service management. Vista lets service contractors easily manage service agreements, streamline service dispatching, and provide mobile construction work order tools so your techs can focus on their work while the back-office stays informed in real time.

AUTOMATED INVOICING & PAYMENT PROCESSES

Reduce work and speed up billing and pay cycles to keep cash flow fluid. Automatic invoicing turns PDF invoices into validated, unapproved invoice entries with minimal manual entry, while streamlined payment processing functionality ensures you never miss vital payments and incur unnecessary work or business bottlenecks.

WORKFORCE AND PAYROLL MANAGEMENT

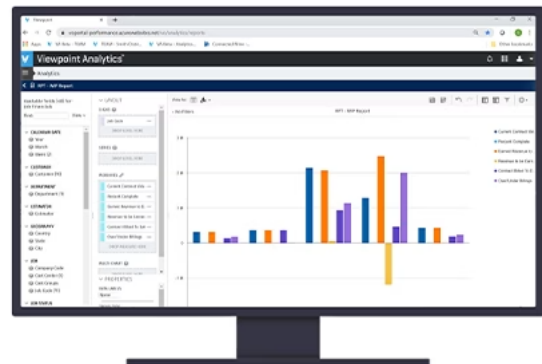

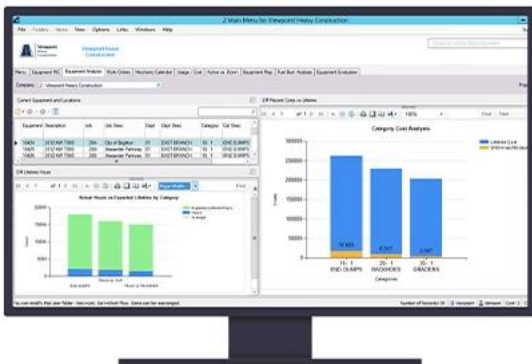

Modernise your hiring, onboarding, training, and payroll processes to gain a vital advantage in building and managing a winning workforce. Vista provides the connected digital workflows and tools to streamline complex HR tasks and untangle union payroll, multi-state, multi-company, federal, state, and contractual construction payroll requirements.

DETAILED ANALYTICS AND REPORTING

Unlock deeper levels of construction intelligence with Vista's detailed reporting and analytics solutions. With easy, intuitive query tools that don't require users to be data scientists, you can turn your project data into easy-to-understand reports to make informed decisions.

EQUIPMENT MANAGEMENT

Vista provides detailed tracking to protect your company's biggest capital assets. Easily monitor equipment location and usage, view monthly calculations of book depreciation with fixed asset schedules, and schedule preventative maintenance for your equipment fleet with alerts when service or repairs are needed. Connected field tools allow mechanics to operate remotely when necessary, with real-time updates of all work completed, full access to equipment service history, document attachments, spare parts requirements (either from inventory or purchase) and so on.

Benefits of a connected construction ERP solution

- Gain real-time visibility and insight to better manage your business
- Stay ahead of scope changes and budget impacts by easily managing contracts, subcontracts, purchase orders and variations and their impact on cost and revenue
- Highly configurable to accommodate the unique aspects of your business
- Reduce risk, improve workflows and deliver higher quality projects
- Automate and control processes with configurable workflows to avoid unapproved change requests, budget overruns and project delays
- Avoid missed deadlines by easily managing and tracking RFI's, transmittals and more
- Connected mobile field solutions extend project and service management functions to the field for different roles to ensure greater efficiency, accuracy and visibility over project performance, reducing delays, removing paper and double handling of data

Vista™ is part of the Trimble Connected Construction suite, which offers integrated solutions between the office, field and extended project teams across the entire construction lifecycle.

- Design, detailing and modeling
- Estimating and procurement
- Resource planning and scheduling
- Financial and back-office management
- Project management
- Fabrication management
- Field technology
- Equipment maintenance
- Data sharing and accessibility
- Collaboration and communication
- Drawings, documents and other records

BuildingPoint Australia

BuildingPoint Australia is your gateway to the world's leading construction technology solutions. As the authorised dealer for Trimble in Australia, BuildingPoint is dedicated to changing the way you build.

From innovative layout and scanning solutions to advanced construction software, BuildingPoint's product suite is designed to optimise productivity, accuracy, and collaboration on your projects. Backed by Trimble's renowned reputation for innovation and reliability, BuildingPoint Australia is committed to delivering exceptional customer service and support every step of the way. Join us in reshaping the future of construction – let's build smarter, faster, and better together.
